NEOMED® ANNOUNCES ANOTHER CLINICAL BREAKTHROUGH WITH THE RELEASE OF THE FIRST 100 ML ORAL/ENTERAL SYRINGE.

- **Unique** - The plunger fenestration allows for quick pole placement for gravity feeds.
- **Preferred** - NeoMed’s food grade polypropylene syringe material does not interfere with delivery of human breast milk or lipids, a common limitation with bag deliveries.
- **Integral** - The “vented zone” releases chamber pressure allowing gravity feeding without the need for awkward cling wrap covers.
- **Efficient** - The 100 mL Oral/Enteral Syringe can be used to deliver a single bolus gravity feed of up to 100 mL. Use of a single syringe reduces the need to prepare multiple smaller (≤ 60 mL) syringes, saving preparation time and material cost.

A BABY IN SYNC IS A BABY THAT CAN SLEEP THROUGH THE NIGHT

An infant with apnea needs back up support that seamlessly transitions to synchronized ventilation. NAVA® is that solution.

Premature infants on mechanical ventilation require close attention during development. NAVA (Neurally Adjusted Ventilatory Assist) technology provides the tools to monitor the development of the premature infant while providing synchronized ventilatory support.

- NAVA technology seamlessly switches between patient triggered ventilation and back up support to help minimize unwanted events during apneic periods.

- Premature babies require delicate care and synchronized babies can potentially have reduced agitation, risk of lung injury and lower oxygen demands.

NAVA. Better Outcomes Start with Better Breathing.
