Our Brain and Behavior Center helped pioneer endoscopic third ventriculostomy (ETV) — an advanced shunt-free surgery for children with hydrocephalus. This minimally invasive procedure reduces risks, complications and repeat visits to the OR. It shortens recovery time for patients, and within weeks, head size normalizes and patients can resume regular activity. It's just one of many innovative approaches we offer.

Learn more at neonatology.stanfordchildrens.org

Our neonatology team has a strong tradition of providing innovative, high-quality care for newborns, from world-leading research and advanced simulated training to expert treatments and follow-up care. We care for the smallest and sickest newborns, many of whom need complex therapies, in our 40-bed Level IV NICU. One of 14 academic nurseries participating in NICHD, our success is driven by our team’s dedication to providing nurturing care, advancing scientific knowledge and training the next generation of neonatologists.

Learn more at neonatology.stanfordchildrens.org
Who knows better what ventilatory support a patient needs than the patient? The new SERVO-n® neonatal ventilator, with NAVA® (Neurally Adjusted Ventilatory Assist) and non-invasive NAVA standard*, lets the baby’s own physiological signal control the exact timing and amount of assist for every breath. This same signal also provides the clinician insight into the baby’s breathing drive for diagnostics and weaning.

Give your neonatal patient the support they need to breathe easier, sleep better and grow stronger with SERVO-n and NAVA®.

*Excludes Edi module.
Neonatal Whole Body Cooling is shown to improve outcomes for newborns meeting the requirements for HIE.¹,² Cincinnati Sub-Zero’s Blanketrol® III with it’s “Gradient Technology” and the Kool-Kit® Neonate provide accurate and safe patient temperature management. This system offers the ability to reach and maintain goal temperature as well as provides controlled re-warming for the patient.

- All Therapeutic Hypothermia disposables located in one convenient package
- Self sealing/insulated blanket hoses
- Mittens/Socks allow more family contact without compromising patient temperature
- All products tested and validated by CSZ for CSZ equipment

EVIDENCE-BASED WEBINAR

Early Inhaled Nitric Oxide and Progression of Hypoxic Respiratory Failure (HRF)

View the webinar on-demand at INOMAX.com/earlyino

Created by practitioners, for practitioners.
Review various elements of HRF treatment, including:

- Acute HRF in newborns
- The pathophysiology of HRF
- Optimizing oxygenation in HRF
- Evidence for the earlier use of inhaled nitric oxide in the treatment of HRF

Indication
INOMAX is indicated to improve oxygenation and reduce the need for extracorporeal membrane oxygenation in term and near-term (>34 weeks gestation) neonates with hypoxic respiratory failure associated with clinical or echocardiographic evidence of pulmonary hypertension in conjunction with ventilatory support and other appropriate agents.

Important Safety Information

- INOMAX is contraindicated in the treatment of neonates dependent on right-to-left shunting of blood.
- Abrupt discontinuation of INOMAX may lead to increasing pulmonary artery pressure and worsening oxygenation.
- Methemoglobinemia and NO₂ levels are dose dependent. Nitric oxide donor compounds may have an additive effect with INOMAX on the risk of developing methemoglobinemia. Nitrogen dioxide may cause airway inflammation and damage to lung tissues.
- In patients with pre-existing left ventricular dysfunction, INOMAX may increase pulmonary capillary wedge pressure leading to pulmonary edema.
- Monitor for PaO₂, inspired NO₂, and methemoglobin during INOMAX administration.
- INOMAX must be administered using a calibrated INOMAX DSIR® Nitric Oxide Delivery System operated by trained personnel. Only validated ventilator systems should be used in conjunction with INOMAX.

Please see Brief Summary of Prescribing Information on adjacent page.
Discontinuation of INOmax, additional therapy may be warranted.

If methemoglobin levels do not resolve with decrease in dose or and adjust the dose of INOmax to optimize oxygenation.

Monitor methemoglobin with the dose of INOmax; it can take 8 hours or more before steady-

Nitric oxide combines with hemoglobin to form methemoglobin, which does not transport oxygen. Methemoglobin levels increase

Hypoxemia from Methemoglobinemia

Nitric oxide combines with hemoglobin to form methemoglobin, which does not transport oxygen. Methemoglobin levels increase

Rebound Pulmonary Hypertension Syndrome following Abrupt Discontinuation

Wean from INOmax. Abrupt discontinuation of INOmax may lead to worsening oxygenation and increasing pulmonary artery pressure, i.e., Rebound Pulmonary Hypertension Syndrome. Signs and symptoms of Rebound Pulmonary Hypertension Syndrome include hypoxemia, systemic hypotension, bradycardia, and decreased cardiac output. If Rebound Pulmonary Hypertension occurs, reinstate INOmax therapy immediately.

Airway Injury from Nitrogen Dioxide

Nitrogen dioxide (NO$_2$) forms in gas mixtures containing NO and O$_2$. Nitrogen dioxide may cause airway inflammation and damage to lung tissues.

If there is an unexpected change in NO$_2$ concentration, or if the NO$_2$ concentration reaches 3 ppm when measured in the breathing circuit, then the delivery system should be assessed in accordance with the Nitric Oxide Delivery System O&M Manual troubleshooting section, and the NO$_2$ analyzer should be recalibrated. The dose of INOmax and/or FiO$_2$ should be adjusted as appropriate.

Worsening Heart Failure

Patients with left ventricular dysfunction treated with INOmax may experience pulmonary edema, increased pulmonary capillary wedge pressure, worsening of left ventricular dysfunction, systemic hypotension, bradycardia and cardiac arrest. Discontinue INOmax while providing symptomatic care.

ADVERSE REACTIONS

Because clinical trials are conducted under widely varying conditions, adverse reaction rates observed in the clinical trials of a drug cannot be directly compared to rates in the clinical trials of another drug and may not reflect the rates observed in practice. The adverse reaction information from the clinical studies does, however, provide a basis for identifying the adverse events that appear to be related to drug use and for approximating rates.

Controlled studies have included 325 patients on INOmax doses of 5 to 80 ppm and 251 patients on placebo. Total mortality in the pooled trials was 11% on placebo and 9% on INOmax, a result adequate to exclude INOmax mortality being more than 40% worse than placebo.

In both the NINOS and CINRGI studies, the duration of hospitalization was similar in INOmax and placebo-treated groups. From all controlled studies, at least 6 months of follow-up is available for 278 patients who received INOmax and 212 patients who received placebo. Among these patients, there was no evidence of an adverse effect of treatment on the need for rehospitalization, special medical services, pulmonary disease, or neurological sequelae.

In the NINOS study, treatment groups were similar with respect to the incidence and severity of intracranial hemorrhage, Grade IV hemorrhage, periventricular leukomalacia, cerebral infarction, seizures requiring anticonvulsant therapy, pulmonary hemorrhage, or gastrointestinal hemorrhage. In CINRGI, the only adverse reaction (>2% higher incidence on INOmax than on placebo) was hypotension (14% vs. 11%).

Based upon post-marketing experience, accidental exposure to nitric oxide for inhalation in hospital staff has been associated with chest discomfort, dizziness, dry throat, dyspnea, and headache.

DRUG INTERACTIONS

Nitric Oxide Donor Agents

Nitric oxide donor agents such as prilocaine, sodium nitroprusside and nitroglycerine may increase the risk of developing methemoglobinemia.

OVERDOSAGE

Overdosage with INOmax is manifest by elevations in methemoglobin and pulmonary toxicities associated with inspired NO$_2$. Elevated NO$_2$ may cause acute lung injury. Elevations in methemoglobin reduce the oxygen delivery capacity of the circulation. In clinical studies, NO$_2$ levels >3 ppm or methemoglobin levels >7% were treated by reducing the dose of, or discontinuing, INOmax.

Methemoglobinemia that does not resolve after reduction or discontinuation of therapy can be treated with intravenous vitamin C, intravenous methylene blue, or blood transfusion, based upon the clinical situation.

INOmax® is a registered trademark of INO Therapeutics LLC, a Mallinckrodt Pharmaceuticals company.

Vol. 29 No. 5 • Buyers Guide 2016
neonatal INTENSIVE CARE
Simple design  
Easy to use  
Effective delivery

NeoPAP’s innovative design is literally a breeze...

• CPAP, high flow and resuscitation modes are built into one easy to use device, improving workflow efficiency and reducing costs.
• Baby-Trak® leak compensation and sophisticated alarms give you peace of mind and the ability to focus on the specialized needs of your RDS patients.
• The unique bonnet and patient-friendly interface support developmental care and may help reduce costly skin damage.

See what NeoPAP can do for your NICU...

Sonicu’s patented, cloud-based sound monitoring technology allows market-leading NICUs to define, measure and improve sound problems with actionable data for effective change.

- Define and set realistic sound targets per the American Academy of Pediatrics or unique, user-defined sound level goals.
- Measure results with Sound Target Achievement Reports (STAR) detailing where and when “sound events” occur.
- Improve outcomes and patient satisfaction by reducing harmful peak noise events for a quieter healing environment.

For a complimentary needs assessment or demonstration, contact Sonicu today by calling (844) 476-6428 or email us at info@sonicu.com.

Sonicu is proud to be NIDCAP’s first corporate alliance partner.

neonatal INTENSIVE CARE Vol. 29 No. 5 • Buyers Guide 2016
Human milk makes all the difference

The American Academy of Pediatrics’ (AAP) policy recommends the use of human milk for all preterm infants, whether mother’s own milk (MOM) or pasteurized donor human milk when mother’s own milk is unavailable.

Only Prolacta Bioscience, the leader in the science of human milk, provides:

• A full line of human milk-based nutrition for premature infants

• Human milk products that undergo the most rigorous testing and screening in the industry

To provide your preterm patient with a 100% human milk-based diet, call:
1-888-PROLACT (1-888-776-5228)
www.prolacta.com

PRODUCTS AND SERVICES

Respondents were asked to select categories that applied to their companies. We used previous information for firms that didn't return forms. Also, if companies selected inappropriate or duplicate categories, we made a judgment call on the proper categories. Companies that returned forms have a customized listing of all their product categories in the alphabetical Companies section.

Occurrence of Central Nervous System Malformation in Fetal Alcohol Syndrome, Ramesh C. Jhaiveri, MD; Warren N. Rosenfeld, MD; Luzminda Concepcion, MD; M. Moyhuddin, MD; Cecilia LaQuipilli, MD, Vol 10 No 4, pp 39-44, Sep/Oct 1996

Octave Waveband Analysis to Determine Sound Frequencies and Intensities Produced by Nebulizers and Humidifiers Used with Hoods, Shelley C. Mishe, PhD, RRT, C. Worth Brooks, Jr, MEd, RRT; Franklin H. Dennison, MEd, RRT, RPFT; Kim Valeri Hill, MS, RRT, Thomas Frye, BS, RRT, Vol 9 No 2, pp 39-44, Nov/Dec 1995

On Knowing an Infant’s Pain, Susan Deegan, RN, CPN, Marcie A. Badali, Vol 13, No 2 pp 35-37, Mar/Apr 2000

One Into Two Will Not Go: Noninvasive Sensors Designed for Neonatal Care and Safety, Michael O’Reilly, Vol 22 No 1, pp 29-30, Jan/Feb 2009
ONLY ONE

Neo-Tee®

First Disposable
Infant T-Piece Resuscitator with color-coded manometer verifying PIP & PEEP pressures.

- Provides consistent PIP & PEEP pressure
- Built-in Manometer verifies pressures
- Cost-Efficient

Because they are not miniature adults...

air-Q®

air-Q® is anatomically designed by an anesthesiologist specifically for pediatric airways.

air-Q® is the only “everyday” airway that allows you to intubate.
